LIST OF FOUNTAINS

EXECUTED IN ARTIFICIAL LIME STONE,

BY JOHN SEELEY,

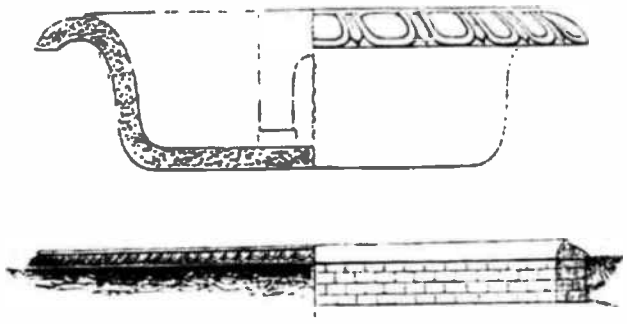
Nos. 1—4, KEPPELL ROW, NEW ROAD, REGENT'S PARK.

*** The material of which all these works are composed being *waterproof*, is safer to use for fountains than any stone, excepting granite, and has now been tried for many years in Scotland. The only precaution necessary is to keep the pipes empty during hard frost,—probably from October 1st to March 1st.

GRECIAN DESIGNS:—

	£. s.
A set of four enriched Tazzas, the largest being 6 ft. diameter, and a corresponding ground basin 18 ft. diameter, the entire height being 11 ft.	65 0
A similar design, but the Tazzas of a flatter shape, and the largest being 8 ft. diameter, with a suitable ground basin 20 ft. diameter (as erected for the Marquis of Ailesbury, at Tottenham Park)	95 0

N.B. When required for any place more than twenty miles from London, the carriage of the ground basin is expensive, as will be obvious from the annexed section print. It is, therefore, economical in such cases to construct the basin of brick, by the country workmen, and to procure only a rim, or coping, as also shown by the second engraving.



An enriched Tazza, 5 ft. diameter, with lotus flower entwined by a snake to jet, with a rim like the above, 17 ft. 6 in. diameter; the whole fountain 7 ft. 6 in. high	36 0
The fountain as erected in the dairy at Blenheim	60 0
A splendid Tazza, 7 ft. diameter, with large centre flower entwined by snakes, as executed from the design of Sidney Smirke, Esq., for the late Marquis of Hertford (exclusive of ground basin); height, 9 ft.	45 0
The fountain as designed by Mr. Barry for the Queen's park, Brighton, viz., a pair of Grecian Tazzas resting on the tails of three entwined dolphins, and a plain ground basin 16 ft. diameter; entire height, 8 ft.	90 0
A magnificent design by Mr. Papworth for the Steyne, Brighton, as follows: a Tazza 15 ft. diameter, supported by four sitting lions and festooned scrolls, surmounted by a cluster of shells, leaf vase, and finial, the whole height about 25 ft., and requiring a ground basin 22 ft. diameter	400 0
A design for a public fountain, consisting of a base with four steps flanked by pedestals, with figures of the Florence Boar, on which an enriched octagon plinth supports a basin 10 ft. diameter, and superstructure of vases, dolphins, shells, &c.	200 0
An enriched Ground Basin 12 ft. diameter, with a tripod of three couchant lions supporting a bowl 6 ft. diameter, in the centre of which is a flower entwined by snakes; entire height, 8 ft.	56 0
A small but pretty Fountain, consisting of a highly enriched Tazza and flower, set in a ground basin, 12 ft. diameter; height, 6 ft. 8 in.	27 0
A very chaste design, consisting of a Ground Basin, 18 ft. diameter, and three Tazzas of the several diameters, 7 ft., 4 ft. 6 in., and 2 ft. 9 in., all enriched in the style of the Medici Vase; height, 13 ft.	100 0
A similar design, as erected in Birkenhead market, but with a base of sleeping lions, and small ground basin, (rim only.)	70 0

The figure above depicted is copied from a fountain in the Barberini Palace; the height is 7 ft. 9 in., and requires a cistern about 20 ft. high to produce a good jet.	21 0
The same figure and several others may be had of a smaller size.	
A Grecian Tazza, 6 ft. diameter, with a centre flower and enriched rim for ground basin; 17 ft. 6 in.	46 0
A large lotus flower and side florets, on tripod of lion's legs, in an irregular ground basin	30 0
An enriched Ground Basin, 8 ft. diameter, with a centre flower; 4 ft. high	30 0
A very neat design, viz., a plain ground basin 8 ft. diameter, in which is an enriched Tazza, 3 ft. 10 in. diameter, surmounted by a small flower; height, 5 ft.	25 0
